Market innovation: Darda Tank Cutter TC120

SAFE COLD CUTTING, FINALLY!

Germany. The carrier-operated TC120 Tank Cutter presented by Darda GmbH, Blumberg, is a market innovation that inspires demolition and recycling professionals. A profitable cutting tool for 3 to 8-ton mini excavators and for the BROKK 260 demolition robot, which opens up completely new markets!

In addition to being well-known for its powerful hand-held equipment, Darda is also a specialist provider of small attachment tools with enormous power potential. The Darda Concrete Crushers, for example, are ranked by industry specialists among the best the market has to offer.

Now the innovative technician from the Black Forest take performance one step further: The newly developed TC120 Tank Cutter is designed for safe cold cutting of steel containers and panels up to 15 mm thickness. With a weight of 270 kg (including rotary drive), it develops a cutting force of up to 660 kN (60 tons), with an inlet pressure of 175 bar. For a steel plate thickness of up to 5 mm, this translates into a cutting performance of an outstanding 60-90 m/h.

The TC120 easily cuts structural steel plates, stainless steel plates, all kinds of tanks and much else, and what's more without the risk of flammable vapors! Coated tanks with residual content, for example, can now be dismantled risk-free. The equipment is operated from a safe distance and without the aid of mobile scaffolding or the like. Cold cutting therefore also achieves a marked improvement in work safety.

Whether for cutting work outdoors or just specific tasks in buildings and interiors with limited space: A mini excavator in combination with the Darda TC120 Tank Cutter can be placed almost anywhere without difficulty. Such dismantling operations will be even easier and more effective, for example, when the attachment is used in conjunction with an electro-hydraulic BROKK demolition robot. Darda GmbH is a longstanding partner of BROKK, the Swedish manufacturer of demolition robots.
